

# HANDS ON THE FLM03E

FIRST EXPERIENCES

MARKUS GEBHARD, KARLSRUHE, AUGUST 2016

[HTTP://GITHUB.COM/GEBHARDM](http://github.com/gebhardm)

# THE FLM03E IS...

- ... the newest generation of a community measurement appliance for energy, water, gas, environment
- ... a worthy successor of the FLM02
- ... designed and provided by Bart Van Der Meerssche@flukso.net

# BOXED

50A current clamps with smaller layout and attached wires; fast detection of current and phase

Base unit with seven ports, built-in WiFi and 868MHz communication

Power Supply, 9V AC also for voltage and phase measurement

# INSTALLATION – THE CURRENT CLAMPS

Clamping  
the Mains  
(mind your  
fingers)

# INSTALLATION – THE BASE UNIT

# STARTING-UP – BASE CONFIGURATION

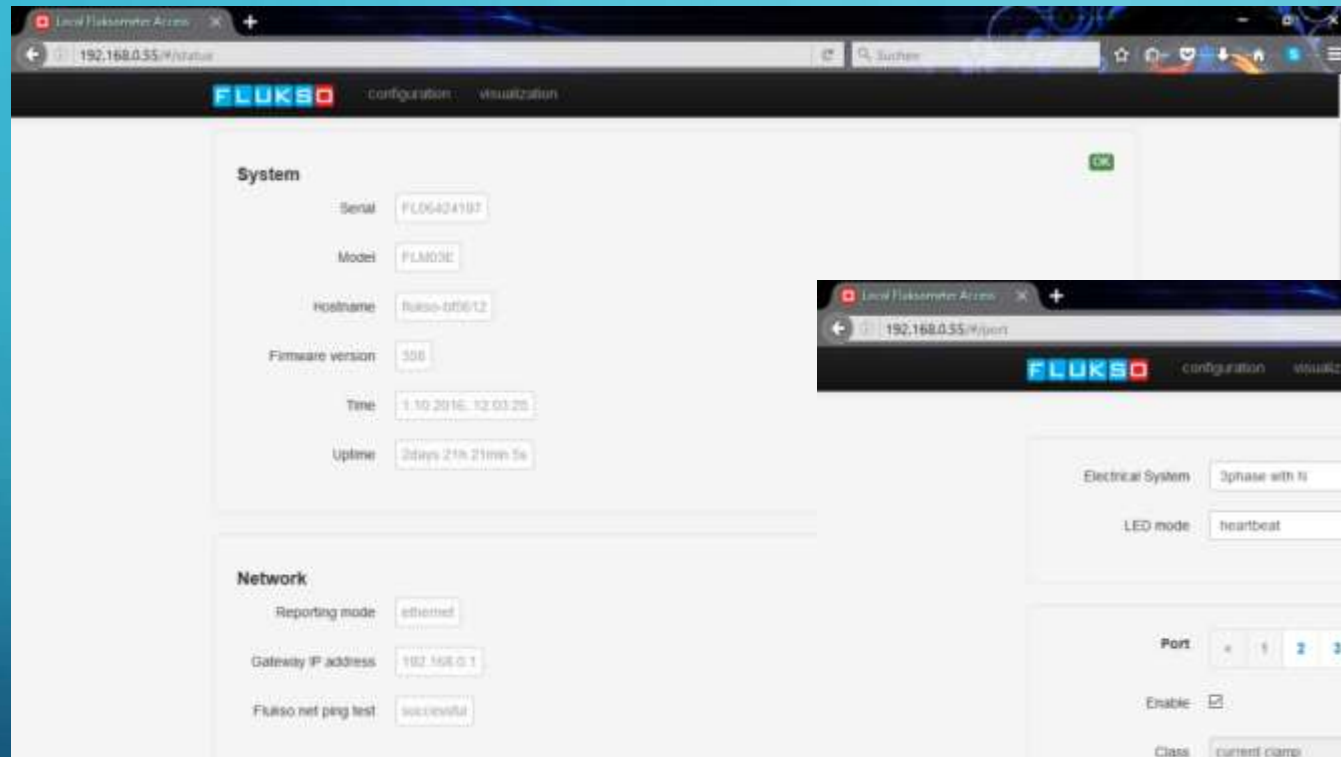

- Hardware

- Attach WAN port “to the internet” (modem/router side of your LAN)
- Attach LAN port to a PC/Mac you are about to use for configuration

- Software

- Browse <http://192.168.255.1> – your PC/Mac gets an IP-address from the FLM03E
- Login as user ‘root’ with default password ‘root’
- Configure your network and sensors (type and name)

# STATUS & SENSOR CONFIGURATION

Local FluksoMeter Access

FLUKSO configuration visualization

**System**

Serial: FLD064021907

Model: FLM03E

Hostname: flukso-020612

Firmware version: 508

Time: 1.10.2016, 12:03:20

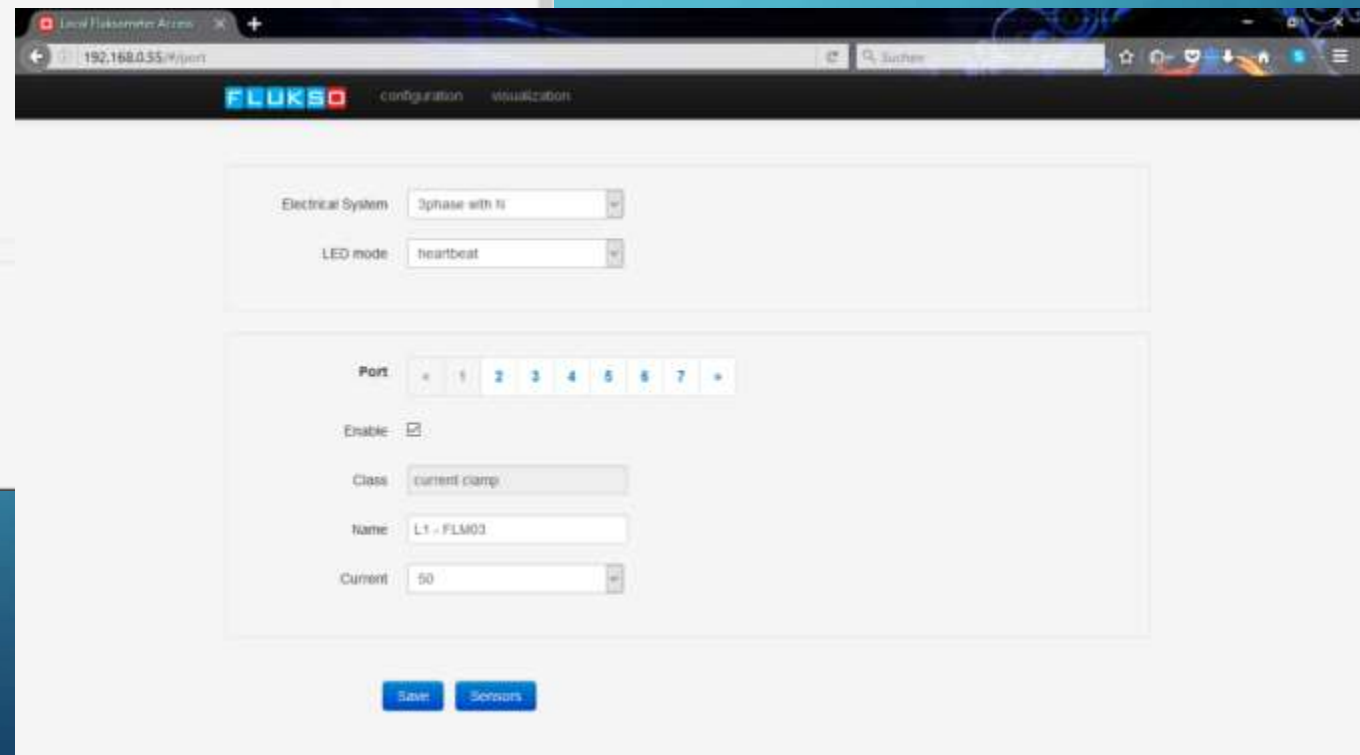

Uptime: 2days 21h 21min 5s

**Network**

Reporting mode: ethernet

Gateway IP address: 192.168.0.1

Flukso net ping test: successful

FLUKSO configuration visualization

Electrical System: 3phase with N

LED mode: heartbeat

Port: 1 2 3 4 5 6 7

Enable: ☒

Class: current clamp

Name: L1 - FLM03

Current: 50
